

The Rule of Twos

Gary White

Fast Method to Mentally Obtain Reciprocal

If adding 2 to the 1st digit is greater than 3, subtract 2

Second digit operation is opposite of 1st operation, i.e., either add or subtract 2

Third digit, no change.

E.g., 301 Radial, adding 2+3 is 5 so you instead subtract to get 1,

Now, since you subtracted, for the second digit you would add 0 + 2 – hence reciprocal = 121

Practice
on these
radials
